Cost effective, high-speed connectivity across Europe. Sounds like an intelligent choice.

We focus on highly scalable connectivity across Europe. So, whether you're a content owner, ISP, mobility or enterprise organisation, guaranteed high-speed access through our i-21 network (with speeds ranging from E1 to Gigabit Ethernet) makes us your ideal partner for hosting content, providing wholesale transit service, corporate access or creating new services.

In fact we bring the Internet backbone closer to your users or customers than any other network in Europe. The pure IP over fibre network places no restrictions on our ability to meet customer demand and because we wholly own our network, we can give you control over it. And we'll never run out of capacity. Our Internet services are also fully integrated into a common service delivery platform, enabling connected customers to take advantage of new services activated near real-time.

We also provide you with the ability to extend your bandwidth provision into carrier neutral facilities or your own site with secure, controlled environments for co-locating hosted services. Equally we provide more control with enhanced reporting capabilities backed by high quality network operations. And rest assured our Management Centre monitors the network and services 24 hours a day, 365 days a year, making our performance not just high, but consistent.

Let's talk. Call +44 20 7025 9000

network management**

Product features

- Available across Interoute backbone and metropolitan network footprint
- Dedicated to pure IP traffic
- Access speeds from DSL access to multi-gigabit speeds
- Domain Name Registration
- Primary and Secondary DNS
- IP address registration
- Simple Mail Transfer Protocol (SMTP) back-up and outbound relay
- Newsfeed (NNTP)
- Static and dynamic IP routing protocols
- SLAs to ensure high-quality network performance
- Web-based network and performance monitoring
- Wide range of value-added options including managed CPE, firewalls and hosting
- 24 x 7 proactive network management.

Our service options

- Flat rate and usage based tariffs
- Service and application-centric options
- Internet access with IP address allocation
- Full or partial IP transit for multi-homed customers.

Technical specifications

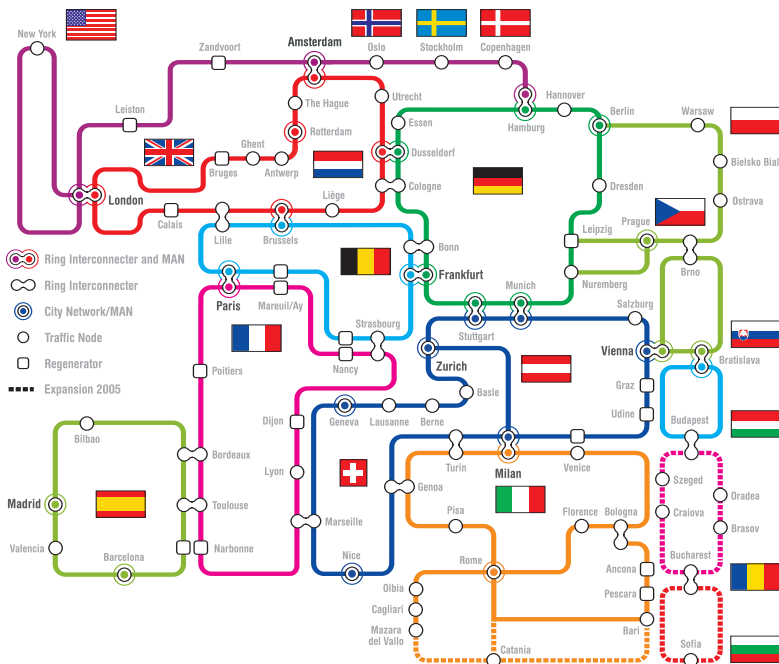

- Bandwidth options: **2-1000 Mbps**
- Network availability: **100%**
- End-to-end latency: **< 40 ms RTD Europe**
< 100 ms RTD USA
- Packet loss: **< 0.1%**
